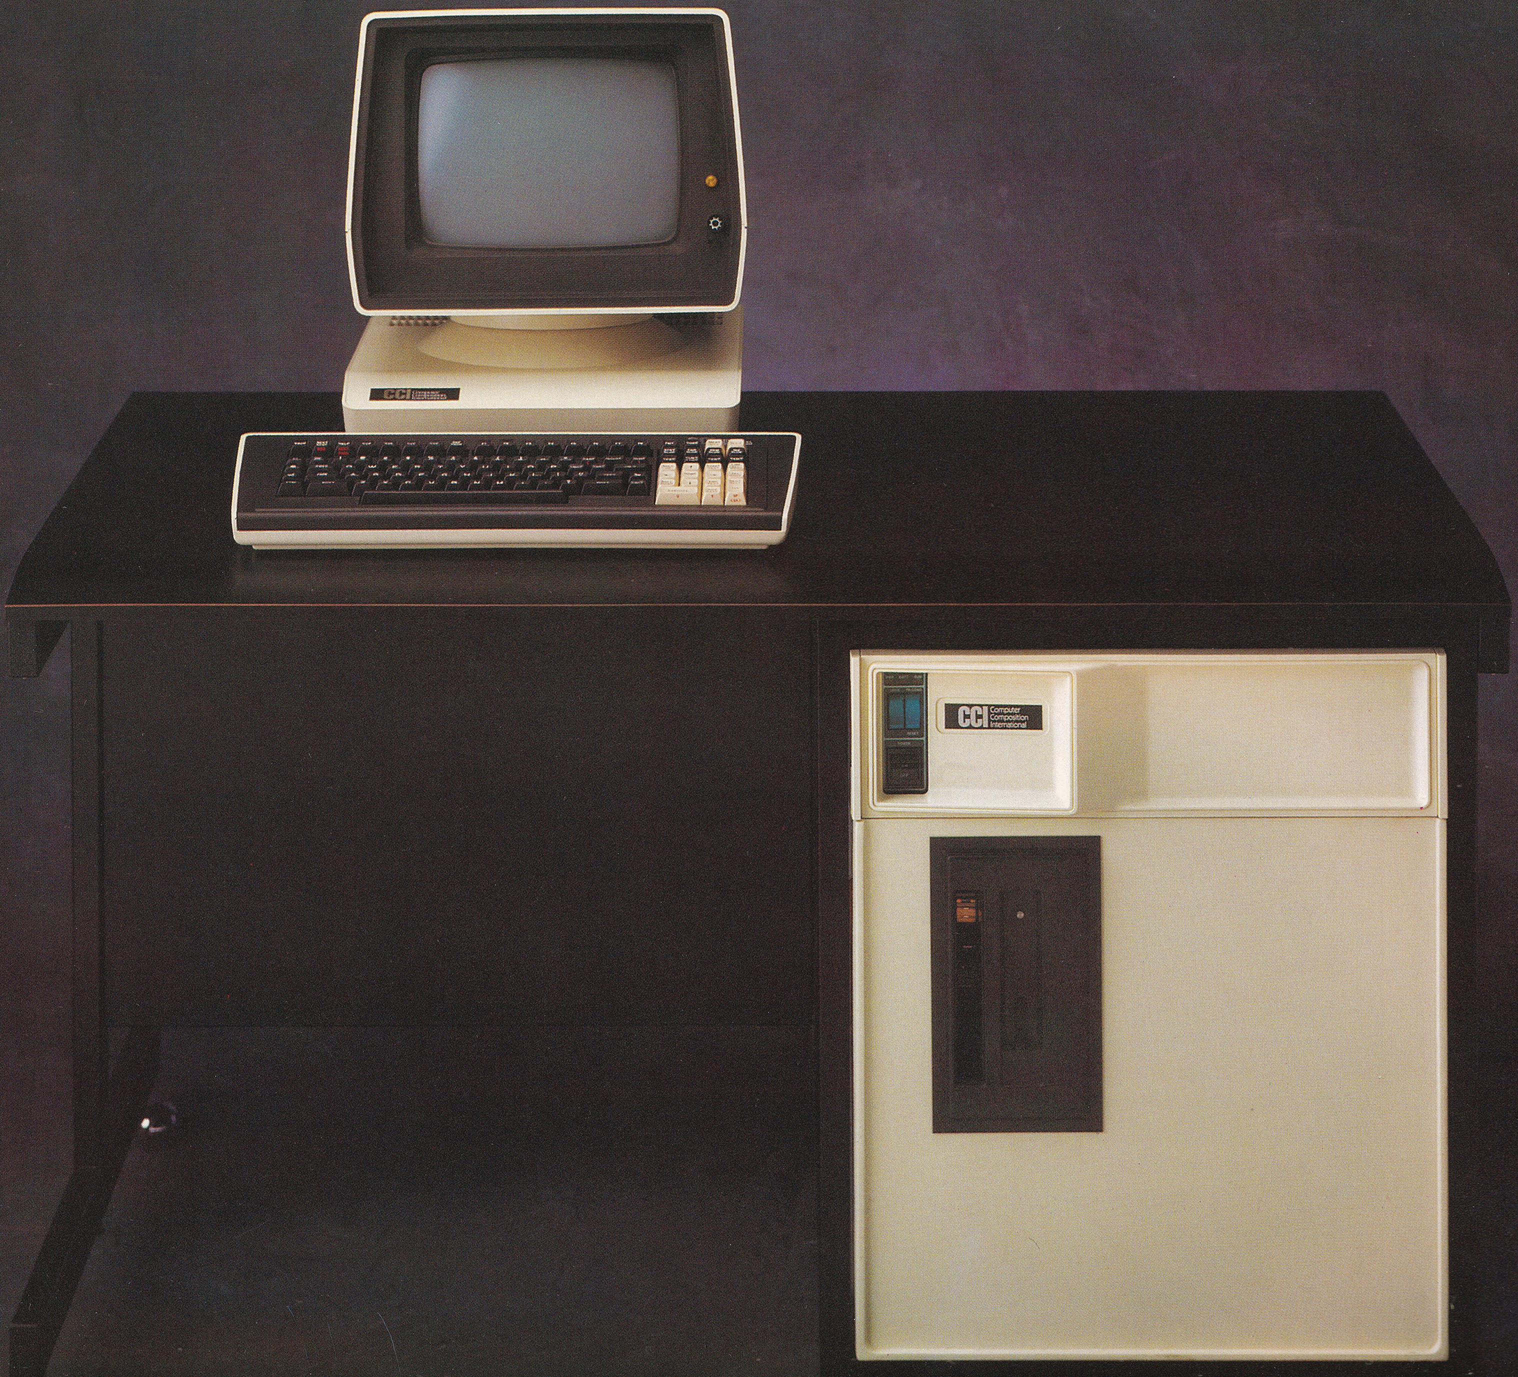
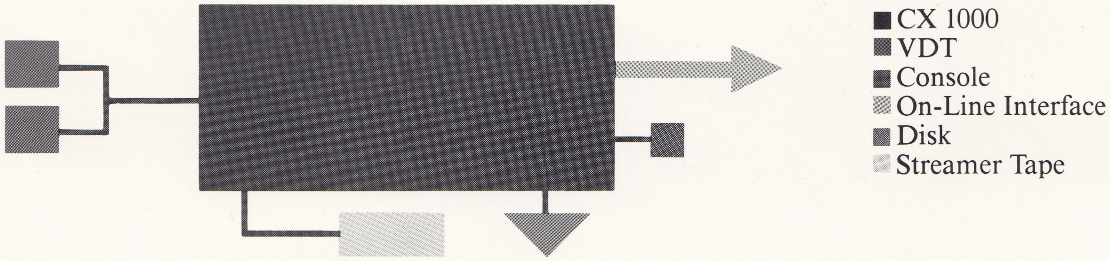
CX1000



CCI Computer Composition International

CCI

CX1000



OVERVIEW

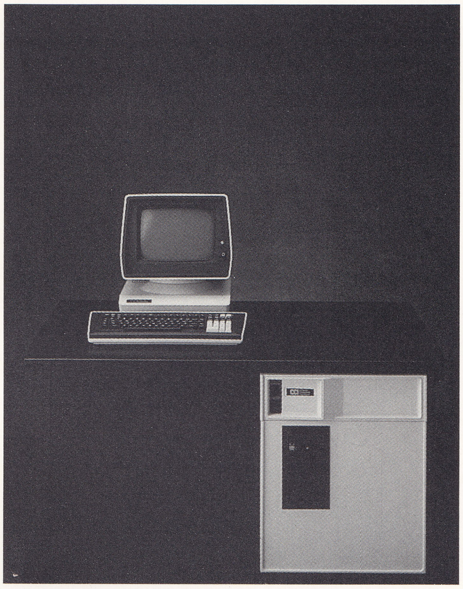
The CX1000 is a powerful and versatile computer typesetting system. As an integral part of the CCI family of products, it is an affordable entry level system that is completely expandable to every typesetting need. The CX1000 gives performance previously only found in much more expensive systems. The CX1000 is delivered with two 400 VDTs, 10 megabytes of on-line storage, computer console, desk top enclosure, 256KB of memory, on-line typesetter interface, training and installation and a complete set of over 32 programs to automate your typesetting operation.

APPLICATION OVERVIEW

The CX1000, designed for general purpose typesetting, can excel in all production environments. The flexibility of software and hardware configurations allows the tailoring of the CX1000 to any application.

Commercial: As an entry level - system, the CX1000's speed, flexibility and sophistication are unparalled. No job is too tough. The CX1000's inherent modularity rules out obsolesence.

Inplant: The CX1000 can operate as an individual system or as part of a network with CCINet allowing different departments to have their own system that can communicate with any other CCI system. The modularity allows full upgrade potential for hardware and software.



HIGHLIGHTS

- 2 400 VDT's
- 256KB Eclipse Computers
- Multix Operating System
- Multi-Level File Manager
- Software Reverse Leading
- Commercial Tabs
- Commercial Rag
- 700 Kern Pairs
- Advanced Width/Kern Program
- English Dictionaries
- 99 Secondary Dictionaries
- Financial Tab Program
- XY Positioning
- Electric Pica Pole

FEATURES and BENEFITS

Expandibility
The CX1000 design allows modular upgrades in both software and hardware.

Low package price
The small shop receives the flexibility, consistency and added power of a CCI front-end system at a competitive price.

Commercial tabular program
With the Commercial Tab package CCI gives the user the broadest spectrum of tabular flexibility in the industry. Complex tables and forms work can be set easily and quickly.

XY positioning
Allows complex advertising makeup, two column paging and forms work to be done quickly and efficiently.

English dictionary and 99 secondary dictionaries
Hyphenation and justification is controlled by an extensive dictionary containing in excess of 20,000 roots that can be expanded by the user, as well as by discretionary hyphenation, temporary job related dictionaries and rules of logic. In addition the system comes standard with 99 user programmable secondary dictionaries for specialty jobs and variations in standard hyphenation.

SPECIAL CONSIDERATIONS: Systems that support it: N/A. Memory consideration: Up to 384KB. Environmental: Office. Modem Type: Bell Compatible. MUX channels: 8 MUX ports. Communication protocol: Handles TypeLink, TyComNet and CCINet.
